

KDT900 – Factory Settings

Introduction

The KDT900 uses a persistent storage model and all changes to the devices configuration and registry will be retained through power cycles. This document describes how to restore the factory configuration of the device.

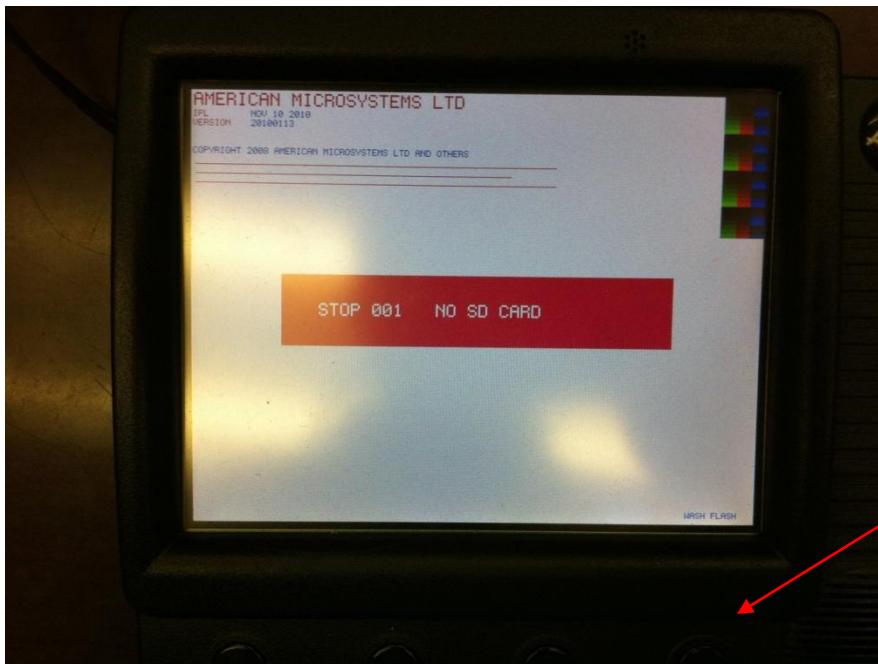

SD Card

For Factory Settings, make sure the only file located on the SD card is the firmware image “KDT900.k9x”.

Internal Flash Reset

To reset the internal flash to factory settings:

1. Power off the KDT900
2. Remove the SD Card
3. Power on the KDT900
4. Within 3 seconds of powering on, press the RIGHTMOST labeled “wash flash”
5. Make sure the screen shows “Washing Flash” in the red box
6. Once complete, the unit will reboot and give a Firmware Read Error. Reinstall the SD card and power on.

Push rightmost button within 3 seconds to wash flash
