

KDT900 – Kiosk Mode Web Browser: IEsimple

Introduction

Included in firmware release versions greater than 1.0.2, a kiosk mode browser based on the standard Microsoft Internet Explorer is installed in the KDT900 firmware image.

iesimple.exe

IEsimple is a simplified version of the standard Pocket Internet Explorer available on the KDT900. IEsimple removes all user interface elements from the normal IE except for the browsing window. No tool-bar, status-bar, or menu-bar is visible in IEsimple.

On startup, IEsimple will automatically enter the current homepage as set in the Internet Properties applet in the Control Panel of the KDT900. The corresponding registry key is:

```
HKEY_CURRENT_USER\Software\Microsoft\Internet Explorer\Main\StartPage
```

The iesimple.exe application resides in the WINDOWS/ directory. It is possible to copy this application to the Storage Card's "Startup" folder to execute iesimple.exe on boot.
