

The road to efficiency.

Intermec logistics solutions are your fastest route to higher efficiency.

Efficiency every step of the way.

Loader scans bar codes on freight as he loads the truck. He is alerted if wrong freight is loaded on the truck. Misloads are eliminated.

Driver uses Intermec unit to verify load and route. He then leaves for first delivery stop.

Upon each delivery, system transmits driver arrival time and other data back to host computer, giving service reps real time proof of delivery (POD) and in-transit load location information.

Intermec logistics solutions. Shift into higher gear.

Imagine if you could do all this:

- Track and locate every pallet in seconds.
- Provide real time shipment status for customers.
- Never lose another shipment, misload another truck, or waste another minute on backtracking for pickups.

You'd be on the road to increased customer satisfaction, a more efficient operation, and a healthier bottom line.

It's all possible with Intermec logistics solutions. In concert with its experienced partners, Intermec delivers dynamic and proven solutions for virtually any logistics requirement. Since Intermec works only with the best in class partners, customer satisfaction is ensured. Our partnerships with top tier ERP (enterprise resource planning), WMS (warehouse management system), and POD (proof of delivery) providers means faster, smoother automation implementations.

Our solutions give you the power of real time information to track a shipment every step of the way from pick-up to delivery.

With Intermec logistics solutions, you can focus on your business — moving goods from one customer to another better and more efficiently than your competition.

The road to higher efficiency is just a call away—Intermec.

Intermec

Dispatcher sends new pick-up information to the driver via wireless network.

Bar codes placed on freight can be scanned to start tracking process at every pick-up.

Pick-up information is transmitted back to host computer for early load planning.

Nobody keeps you rolling like Intermec.

You need accurate, real time information to be successful. The ability to gather and rapidly share that information through automation can be a powerful competitive advantage for you, and the customers you serve.

Choose the Intermec advantage. Our logistics solutions include bar code labels, printers and scanners, mobile computers, local area and wide area wireless networks, software, and RFID (radio frequency identification) tags and labels.

In short, everything you need to identify, track and locate the shipments or information you handle is available from one trusted source—Intermec.

Pick-up and Delivery

Intermec gives you a fully scalable solution for pick-up and delivery operations. Our mobile computers offer you the flexibility of wireless to help reduce paperwork and overhead, while improving customer service.

Goods Management—Date and time stamping of all activities allows complete track and trace capabilities for all stages between pick-up and delivery.

Proof of Delivery—Our rugged, pen-based mobile computers provide you with on-screen signature capture and package scanning for unmistakable proof of delivery.

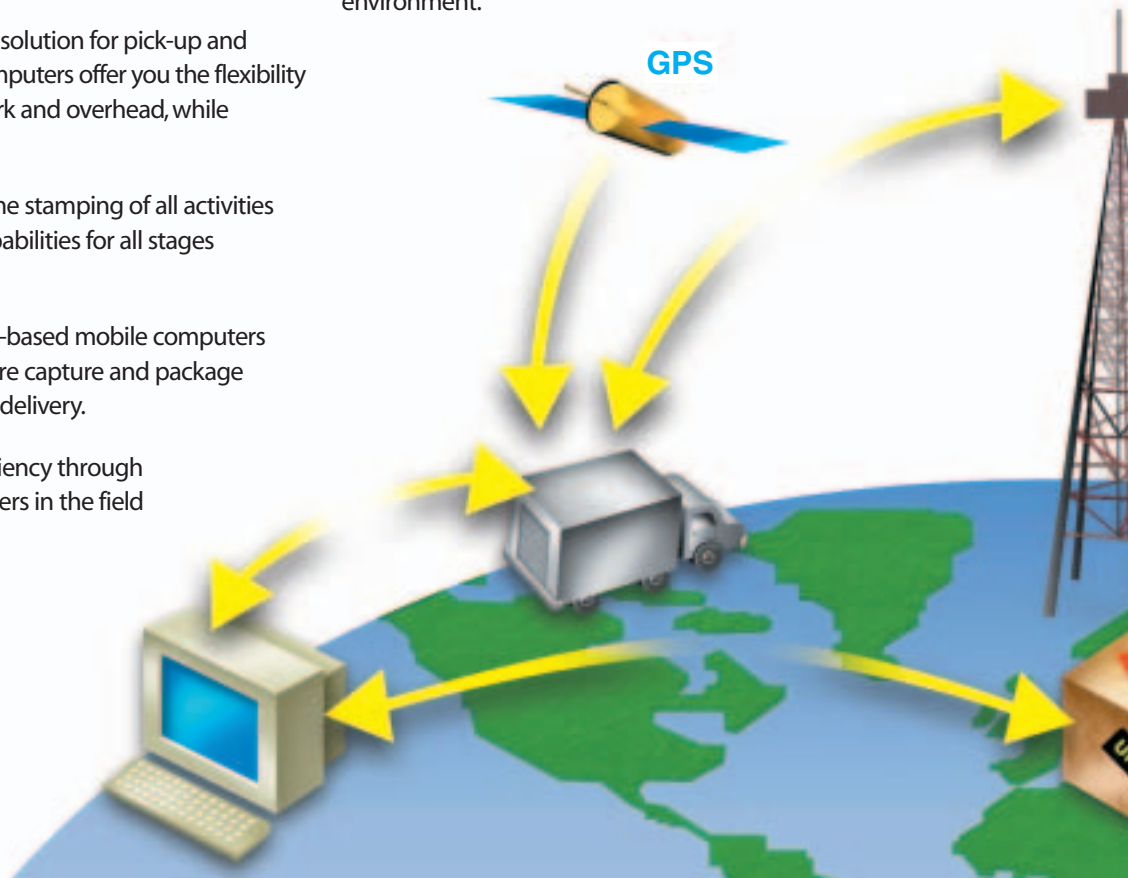

Driver Messaging—Get higher efficiency through real time communications with drivers in the field by adding new pick-ups wirelessly.

Parcel Identification

Bar code labeling gives you fast, accurate identification of parcels and pallets.

Customer Site—Cost effective bar code printers can be placed at customer sites so parcels are already labeled before pick-up, saving driver time so you can schedule more pick-ups and deliveries during the day.

Depot or Hub—Parcels receive labels when they arrive at the depot or sorting hub vs. at the customer site. Intermec's portable- or fixed-mount printers meet the need in any work environment.

Driver returns to terminal at end of day. All load data is already in host computer. No keypunching errors or paperwork to worry about.

Unloaders scan bar codes as freight is unloaded to determine proper freight placement for outbound line haul trailers and next day delivery planning.

Freight is scanned again as it is reloaded that evening to confirm proper loading sequence and load accuracy for next day's deliveries.

Parcel Routing

Once your bar-coded parcels arrive at the depot or sorting hub, they can quickly and accurately be identified using an Intermec bar code reader.

Receiving—Your efficiency is dramatically increased by fast, error-free identification.

Cross Docking—Parcels are verified in real time, so you will always know the right shipment is at the right outbound location.

Load Routing—Real time information gives you confirmation that parcels are correctly loaded on the right delivery vehicle.

Yard Management

A real-time enabled data collection system can offer significant efficiencies in managing your yard. It allows you to identify trucks and their contents as they enter the yard, assign parking spaces, and begin scheduling outbound loads.

Scalable Communications

Intermec mobile computers give you precision control of data collection and management in a mobile environment. Since communicating this data to the right systems at the right time is critical, Intermec offers you a complete range of scaleable communications options for logistics enterprises.

Batch Communications—Data is communicated through a mobile computer with a docking station using Ethernet or 56K modem to electronically transfer information to the enterprise system.

Radio Frequency—Our Wireless Local Area Network (WLAN) allows data on mobile computers to be communicated automatically when the driver is within range of a receiver (access point) inside the yard, depot or hub.

Wide Area Network—We deliver wide area wireless solutions for real time voice and data communications, supported by various technologies, including GPRS/GSM, 1x RTT/CDMA, CDPD, Mobitex, DataTAC, IDEN, and satellite.

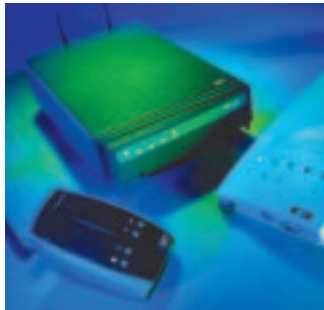

Rugged Mobile Computers

Intermec offers a full range of powerful touch screen mobile computers. They offer integrated wireless local area, wide area and *Bluetooth communications capabilities that function independently and simultaneously in the same unit for either in-premise or out-of-premise applications. The latest offering in this line is the intuitive and easy to learn 700 Series Color mobile computer. Bluetooth compatible printing and GPS options are also available. The optional integrated digital imager can take photographs—ideal for proof of delivery applications.

Bar Code Printers and Media

With Intermec, you'll get an extensive range of high speed fixed and portable printers for labeling parcels and pallets at either customer sites or sorting hubs. Intermec labels give you outstanding design flexibility.

Wireless Local Area Networks (WLANs)

WLAN technology allows accurate load and unload verification at your sorting hub or depot. Intermec's patented dual-slot access point protects your technology investment by offering simple upgrade paths to new standards and technology.

Industrial Bar Code Scanners

Intermec's rugged bar code scanners can be connected to PC's or forklift mounted mobile terminals to allow fast and accurate data collection at receiving, cross docking, and loading. Wired and wireless mobile computers with integrated bar code scanners offer great flexibility in the industrial environment.

About Intermec...

Intermec Technologies Corporation, a Unova Company, is a global leader in the development, manufacture and integration of automated data collection, wireless systems, terminals, mobile computing, printers and media. Our products and services are used to improve productivity, quality and responsiveness of business operations in multiple industries. Intermec has been serving customers since 1966.

Intermec offers comprehensive logistics solutions, including:

- Data capture scanners and wedges
- Wireless Local Area Networks (LANS)
- Wireless Wide Area Networks (WANS)
- Personal Area Networks (PANS)
- Wired or wireless handheld, vehicle and fixed-mount terminals
- Label and media supplies
- Wired and wireless fixed or mobile printers
- Emerging data collection and management technologies, including smart card and RFID tags
- Software-based solutions
- Professional Services support the purchase, implementation, management, and operation of Intermec's industry leading supply chain management systems.

Technology financing and leasing options are available.

Intermec serves thousands of companies worldwide, including 75 percent of Fortune 500 companies and 60 percent of the Fortune 100. Intermec offers comprehensive supply chain automation solutions and helps companies improve productivity in the areas of manufacturing, warehousing, distribution and logistics, mobile and field service work forces, retail, healthcare, and government environments. The company has extensive expertise in local and wide area wireless network implementations for all of those applications.
