Intermec

Celebrate Newest Addition to the 2400 Series in a Big Way …with a *Discount!*

5% off NOW on all 2400 series products

We are so excited about our newest member of the 2400 product family. We just have to share the joy! Instead of giving out cigars, we're giving a discount.

Effective (October 5, 2001), list prices on ALL existing 2400 products are discounted an additional 5% on shipments to resellers through December 16, 2001.

The 2400 family has it all!

For years, manufacturing, warehousing, distribution, and retail customers have favored the 2400 series' reliability, ease of integration and inherent investment protection. The discount applies to the 2410, 2415, 2420, and 2425 hand held, 2455 vehicle mount, and 2460, 2461, 2480, 2481, 2485, and 2486 stationary terminals.

Intermec is committed to responding to evolving market needs with enhancements to the 2400 family. The most recent example of this commitment is the introduction of our new family member: The 2435.

2001 has seen many enhancements to the 2400 family, the most extensive Wi-Fi compliant family in the industry. Highlights of 2001 enhancements are: DHCP client integration, support for Berkeley Sockets, a 2410/2415 display improvement, and integrated PDF scanning.

2400s preserve your customers' IT investment

Applications run seamlessly on all products in the family without the need to reprogram or recompile. A single executable maintains an entire family of form factors. Allowing application changes to be executed and deployed with unparalleled ease.
