

Introducing
MobileLAN™ card 11
... available now!

Free from wires

Coming July 2001, **MobileLAN™** card 11 enables the mobile worker untethered network access to e-mail, intranets and the Internet so they remain as productive as possible. **MobileLAN** card 11 from Intermec provides fast, reliable, simple and secure wireless access.

Fast network speed

Mobile workers will enjoy the speed at which connections and data transfers occur with data rates up to 11 Mbps, which rivals T1 data rates.

Rapid, low-cost networking

IT departments appreciate the speed at which temporary and office networking can be accomplished – all without expensive wiring expenses.

User friendly

Configuration of the client is easy with the configuration utility, getting started guide, and CD that ship with **MobileLAN** card 11.

Advanced technology – Better value

Direct sequence spread spectrum technology, an integrated diversity patch antenna, Wi-Fi certification and IEEE 802.11b standards– make **MobileLAN** card 11 a tremendous value when compared with competitive cards.

No technology lockout

The **MobileLAN** family of products offer customers wireless solutions that enable the mobile worker, protect IT investments, provide migration paths, ensure backward compatibility, and are technologies based on current standards with proven interoperability. True device mobility, full integration into a wired enterprise, and seamless roaming are all benefits of the **MobileLAN** family of wireless products.
