Quick overview
Reliable Access Client

The RAC replaces the Funk Security Client on Intermec devices running WM 6.5 or 6.1 (different Installers).

In contrast to the Funk Security client the RAC can connect to different WLAN networks without user intervention, similar to MS ZeroConfig. Using the Funk Security client only allows one WLAN network setup of four definitions being active, whereas RAC will switch between defined WLAN networks automatically (more than 10 possible profiles).
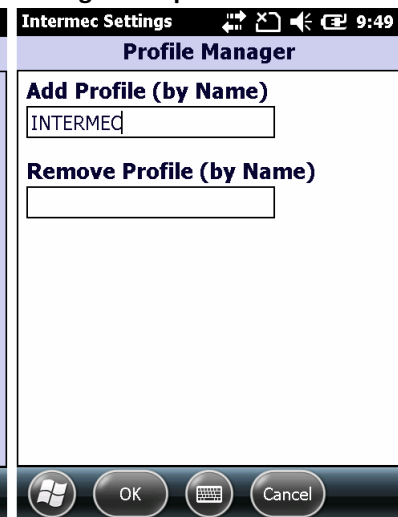

Overview

**Start RAC configuration**
