Operation & Product Features

- **Power Up Test:** When the scale is turned on, all display segments will appear for approximately 3 seconds before resetting to zero or disappearing and 0 being displayed.

- **Stable Reading Indication:** On the display, a down arrow will appear in the lower left corner indicating that the weight reading is stable. During weighing, this down indicator disappears and will reappear once a stable reading has been reached.
- **Weight Unit Indication:** On the display, one of the four right facing arrows on the right side will appear indicating the weight unit selected: kg, lb, oz or lb:oz. (kg, lb or oz only for ES200L)

- **Overload:** If the applied load exceeds the capacity of the scale, an "E" will appear on the display and the load should be removed immediately. The scale will return to normal operation.
- **Negative Value:** When a load is removed from the scale, any zeroed value will be displayed as a negative number. To return to normal operation, the zeroed value can be cancelled by pressing "On/Off/Zero".
- **Zero Function:** Values can progressively be added to a sample. By pressing the "On/Off/Zero" key, the scale display returns to zero. After adding additional mass, press "On/Off/Zero" to zero the scale again. Additional mass may be added up to the capacity of the scale. While removing the sample from the scale, a total gross weight of the sample will be displayed as a negative value. Zero the scale again before subsequent usage.
- **Low Battery Indication:** The display will show "Lo" when the batteries are weak and need to be replaced.
- **Auto Shut-Off:** To extend battery life, the scale will automatically turn off after approximately five minutes if no key press or active weighing is occurring. This feature is only active with battery operation.

Two Button Keypad

- **On/Off/Zero:** Pressing this key turns on the scale. The same key operates the zero feature when the scale is "ON". A long press of three seconds will turn the scale off.
- **Units/Cal:** Press this key briefly to change the weighing unit. The following weight units may be selected: kilogram (kg), pound (lb), ounce (oz), or pound:ounce (lb:oz), (kg, lb, or oz only for ES200L). Pressing and holding this key longer will start the calibration process.

Calibration

For best results, calibrate the scale at regular intervals. This is especially important if the scale is in use for prolonged periods.

1. Allow the scale to warm up and stabilize for two minutes before commencing the calibration procedure.

2. Press and hold the "Units/Cal" key until "CAL" flashes on the display.

3. Press the "On/Off/Zero" key to capture the scale zero. The platform should be empty and the display shows "-C-"

4. After the zero is captured, the display will show "xxx". The value "xxx" is the span calibration weight.

5. Place the calibration weight on the platform and press "On/Off/Zero" key. The display will again show "-C-".

6. After span capture, the display will return to the normal weighing mode.

NOTE: If "CAL E" appears on the display, a calibration error has occurred and the process should be repeated. The message "CAL E" will appear if the calibration steps are not followed in the correct order or if an incorrect calibration weight was applied.
