

Precision Laboratory Stainless Steel Weight Sets

Precision weight sets come in either a 5-3-2-1 or a 5-2-2-1 combination. In a 5-3-2-1 set there is one weight of each denomination. For example, a 1 kg to 1 g set would include the following weights:

1 - 1 kg weight 1 - 50 g weight 1 - 3 g weight
 1 - 500 g weight 1 - 30 g weight 1 - 2 g weight
 1 - 300 g weight 1 - 20 g weight 1 - 1 g weight
 1 - 200 g weight 1 - 10 g weight
 1 - 100 g weight 1 - 5 g weight

In a 5-2-2-1 set there is one weight of the five denomination and one weight of the one denomination with two weights in the two denomination. For example, a 1 kg to 1 g set would include the following weights:

1 - 1 kg weight 2 - 20 g weights
 1 - 500 g weight 1 - 10 g weight
 2 - 200 g weights 1 - 5 g weight
 1 - 100 g weight 2 - 2 g weights
 1 - 50 g weight 1 - 1 g weight

Metric and avoirdupois sets with weights larger than 500 g or 1 lb include a hardwood case with velvet-lined pockets, forceps and/or weight lifter.

All weight sets with the largest weight of 500 g down to 500 mg come in a precision-machined polyvinyl, crush-resistant case and include forceps.

NEW!

ASTM E 617-97 has added two new classes of weights: 0 and 7. Class 0 specifications have tolerances approximately 1/2 that of the existing Class 1. They also must be of Type I construction and have no adjusting material. Class 7 will have similar tolerance specifications as the previously obsolete Circular NBS-547 class T.

Please note that ASTM Class 0 through 7 weights meet the new magnetic susceptibility specifications as stated in E 617-97.

Class 0 weights will be similar in design to the International Organization of Legal Metrology as outlined in OIML R111-94.

Classes include ASTM 0, 1, 2, 3, 4 and are made in accordance with ASTM E 617-97 tolerances and specifications. Traceable Certificates and Weight Calibration Certificates are available at an additional charge.

We can also supply you with a kit in a specific combination of weights that is different from our standard product. Please call us at 800-357-8627 for pricing and additional information.

Metric

Mass Standards

A mass standard, also referred to as a primary standard, is a one-piece, homogeneously-constructed weight designed for use in standards laboratories, calibration and metrology laboratories, and state weights and measures departments. They are used for the calibration of secondary standards and when a high degree of consistency is required over a period of time.

Mass standards are used to check the secondary standards for changes in tolerances. Secondary standards are used on a regular basis for day-to-day calibration checks.

Rice Lake Weighing Systems' high-precision mass standards are available in custom sets or as individual weights, and have traceability to NIST.

For more information on our mass standards, please call 800-357-8627 (TMAP) to consult with one of our metrologists for your particular application.

OIML Precision Laboratory Stainless Steel Weight Sets

The OIML weights that we manufacture are made in accordance with the International Recommendation, OIML R 111, 1994 Edition. We offer the following classes: E2, F1 and F2.

All weight kits come in a 5-2-2-1 combination and include either a hardwood or polyvinyl case, forceps and/or weight lifter.

Individual weights come in their own case with a glove for easy handling.

Weight Calibration Certificates are available for E2, F1 and F2 class weights at an additional charge.

For capacities, special denomination kits or other OIML classes not shown, please call us at 800-357-8627 (TMAP) for pricing and additional information.
