a Statement of Accuracy

The **METTLER TOLEDO Xpress** XTW Test Weights are made in strict conformance with National Institute of Standard and Technology (NIST) Class F tolerances and specifications listed in NIST handbook 105-1.

These specifications and tolerances are intended to set forth minimum requirements for weights used (1) in the field by state and local weights and measures officials in the examination of weighing devices used in commerce; (2) by device installers and servicemen; (3) as reference standards in state weights and measures laboratories; and (4) in industrial, educational, and research laboratories.

■ Cast Iron Grip Handle Weights

Cast Iron Class F Grip Handle Weights larger than 5 kg / 10 lb are legal for trade, which means their design is acceptable for use in checking weighing devices where the price of the item being purchased is based on its weight.

The Cast Iron Grip Handle Weights are manufactured from a high quality iron that meets NIST Handbook 105-1 specifications for hardness. The weights are protected by a durable coat of paint – gold for metric and silver for avoirdupois – to protect the casting from rusting. Weights 50 kg / 100 lb and below are designed to be picked up and handled by hand.

■ Cylindrical Test Weights

Stainless Steel Class F Cylindrical Test Weights are legal for trade, which means their design meets specifications as outlined in NIST Handbook 105-1 and are approved to be used on legal for trade devices within the United States.

XTW Stainless Steel Test Weights are manufactured from grade 303 stainless steel alloy that possesses closely controlled density, low magnetic susceptibility, good stability and resistance to corrosion and handling damage.

■ 30 lb Combo Weight Kit

The XTW 30 lb Combo Kit is supplied in a case with metal reinforced corners and bottoms with padded handles for easier carrying. Weights 200 g / 8 oz and above have their own compartment within the dense foam interior case. Smaller weights are contained within a smaller synthetic leather case that fits into the larger "master" carrying case. This "case within a case" design helps keep smaller weights from getting lost and also allows smaller weights to be taken out of the master case and used closer to the user's application.
