Model: 645
Subject: New Set Screws for Film Pressure Roller

A new nylon patch set screw P/N 83148900A is now being used in place of the double set screws in the sealing belt frames to adjust the tension on the film pressure roller. This new design is vibration resistant and eliminates the need for the double set screw to lock the adjustment. This change was made on 645 Wrappers beginning with S/N 3092872-3LB.
