20.2	Examples in REG. MODE	4-8
20.3	Examples in ACC. MODE	4-9

SECTION I

INSTALLATION

OF THE

LP - SERIES

PRINTING SCALE

NOTICE TO INSTALLER

Refer to Calibration Procedure for the Following:

1. Change the External Resolution.
2. Enable / Disable the Multiple Range Operation.
3. Change the Capacity.
4. Change the position of the decimal point.
5. Change the unit weight for calculating the price.
6. Select Lbs. or Kg mode.
7. Change the language option to print.
8. Set functions based on the regulation of each country.

If problems are encountered in making any of these changes, contact your DEALER.

CAUTION:

Scale uses a rechargeable battery to retain programmed information. This battery must be charged before the scale is turned off or the information that was programmed in may be lost. It takes approximately 2 days to fully charge battery. Battery will remain fully charged even if scale is used intermittently. Once fully charged, battery will retain programmed information for up to 6 months with power turned off. The first time scale is used, to insure not losing information programmed in, do one of the followings:

**LEAVE POWER TO SCALE ON AT LEAST 2 DAYS
BEFORE PROGRAMMING**

OR

**DO NOT TURN OFF POWER FOR AT LEAST 2 DAY
AFTER PROGRAMMING SCALE**

1.0 Installation Instructions:

1.1 Open packing case and remove contents consisting of the followings:

- A. Scale base with label roll installed.
- B. Platform
- C. 5 1/4" diskette containing program for inputting PLU information
- D. Cable for connecting PC to scale.

Note: Item C and D above are optional.

- 1.2** Install platform by inserting the four pins on it's back into the four holes in the round rubber supports mounted on the top of the scale base. Apply firm pressure evenly on the top of the platform, rocking it gently to seat it completely.
- 1.3** Place the scale on the surface on which it will be installed and level the scale by rotating the adjuster knobs attached to the four legs of the scale while observing the bubble level. This level may be observed through a small hole in the label printer cover. The scale is level when the bubble appears in the center of the black ring. The adjuster knobs can be reached by reaching under the edges of the scale.
- 1.4** Plug the scale power cord into a AC outlet.
- 1.5** Switch on the power to the scale with the power switch mounted the left side of the scale. The scale will beep and go through a self test during which it will sequentially display all of the digits from 1 thru 9 in all display position.
- 1.6** Place the **PGM, REG, ACC** switch in the **REG** position.
- 1.7** Place the **PGM, REG, ACC** switch in the **PGM** position.
The scale is now set up and ready to be programmed.

SECTION II

PROGRAMMING INFORMATION

OF THE

LP - SERIES

PRINTING SCALE

2.0 Information Related to Scale Programming:

This section is devoted to presenting the general concepts and defining the terms related to programming the **LP-SERIES**, Printing Scale. It should be read carefully prior to attempting to program the scale. It should also be used as a source of information, in the future when questions arise.

2.1 Four Programming Categories

- A. Those entries which affect the **PLU** (Price Look Up) of each item in the system uniquely and thus affect what is printed on each label. These consist of such items as **PLU CODE**, **ITEM CODE**, **COMMODITY NAME**, **MESSAGE NUMBER**, **UNIT PRICE**, **SHELF LIFE**, **PROGRAM TARE** and **GROUP CODE**.
- B. Entry of **PRESET** key informations.
- C. Entry of **MESSAGE** informations which are called by **PLU**.
- D. Those entries which affect all labels printed equally. These consist of the setting of **Text** which is to appear at the Top and Bottom of all labels, **DATE**, **of TIME**, **of DEPARTMENT CODE**, **of LABEL FORMAT**, of Adjustment of Printing Position for labels, of informations to be printed on the label and of the Range that makes the label to be printed out in **AUTO** Print Mode.

2.2 Description of Items Common to All Labels

A. Text For Non PLU Item at Top of Label (HEAD)

If you make a Non PLU item sale label with the unit price using Numeric Key, you need a special message for the item name. The one line message to be printed at the top of label is designed for this purpose. It is called as **HEADER**.

B. Text For Message at Bottom of Label (SHoP)

If you have selected label format types without preprinted shop address, you may enter a two line message of up to 28 characters per line, which will appear at the bottom of each label printed. The message often entered is the address and telephone number of the shop where the scale is being used but can be any information you wish to enter.

C. DEPARTMENT CODE Setting (dPtno)

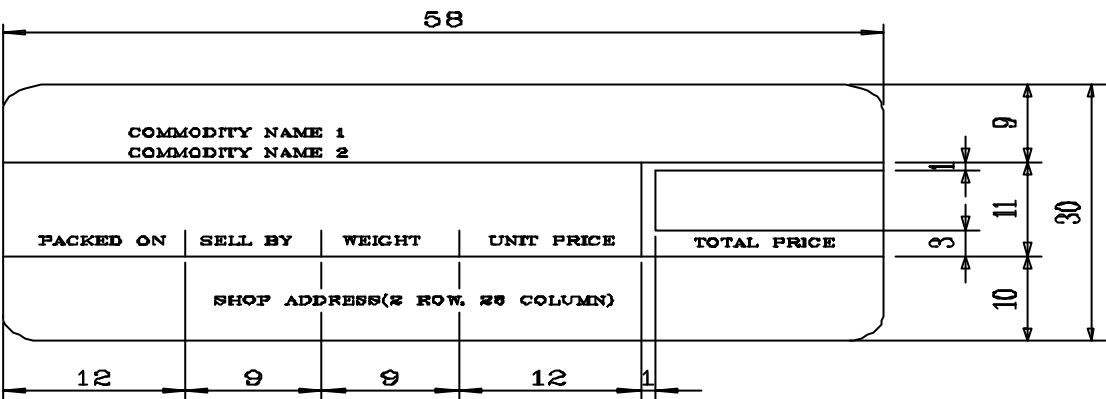

The **DEPARTMENT** Code designation appears as the first two digits on the barcode if one is used. It can be used to identify the department in which the sale was made with the Printing Scale.

D. LABEL FORMAT Setting (LABEL)

The **LP-SERIES** offers 3 types of **LABEL FORMAT** from which you must choose one. These are shown in FIGURE 2-1, 2-2, and 2-3. They offer the following options:

CAS

STYLE A THERMAL LABELS

UNITS : mm

FIGURE 2-1

CAS

STYLE B THERMAL LABELS

FIGURE 2-2

CAS

STYLE C THERMAL LABELS

UNITS : mm

FIGURE 2-3

- a. Barcode Format or no Barcode
- b. Either one line of double height letters or two lines of single height letters for printing Item Name of PLU.
- c. Either a preprinted message printed by the label manufacturer or a message at the bottom printed by the Printing Scale.
- d. Message for Item or no message.

If the correct label is not used with the corresponding format setting, the printed label will not be printed or feeded correctly.

E. DATE and TIME Setting (dAtE, timE)

The date and time are entered once during initialization and will be automatically updated and retained in the scale even if power to the scale is turned off or the scale is disconnected from the AC outlet.

F. Printing Position Adjustment Setting (AdJSt)

The scale provides for adjustment of exactly where the information on the label is printed by the printer. Normally this will be factory adjusted but, if for any reason the printing is not registered correctly on the label, it may be shifted up or down slightly by changing it from a normal setting of 13. See Figure 2-4 below. The Unit of the value entered is mm.

Feeding Value = 11

Feeding Value = 13

FIGURE 2-4

G. Selecting Special Information Printing for Label (PmodE)

The **LP-SERIES** offers some special informations printing for user. This function may enlarge the range of using scale. The user can print following informations on the label by setting PmodE.

- a. Serial Number
- b. Time on printing label
- c. Packed on date
- d. Sell by date
- e. Recalled PLU Code Number
- f. Include Department Code or Group Code in Barcode
- g. Set the method that change the Unit Price of PLU in REG. mode.

3.0 Methods of Programming PLUs:

There are two methods available for programming **PLUs** into the scale. Of the two methods, B is preferable for the reason indicated the **NOTICE TO THE USER**.

A. Use of the keyboard on the scale as described below.

B. Use of a PC or CLONE connected to the Scale via RS232 cable (provided as an option). The PC program for entering the **PLU** information is supplied on a 3.5 inch diskette (provided as an option).

NOTICE TO THE USER CONCERNING USING A PC TO PROGRAM:

As has been mention above, it is preferable to enter the **PLU** information using a PC as opposed to entering it directly into the scale through it's own keyboard for the following reason:

- a. When a PC is used, all the **PLU** information can be stored on disk and then downloaded to the scale. Therefore, if for any reason, the **PLU** information that has been downloaded to the scale is lost by the scale, it can be easily reloaded from the PC.
- b. It is far easier to enter the data with a PC than through the keyboard on the scale. The PC program for entering data is more user friendly and allows the person programming to look at all of the data at once for a screen full of **PLU** information rather than just a portion of a single **PLU** function as is displayed on the scale.
- c. Since the scale cannot truly display alpha characters nor hold them in the display when they are entered thru the keyboard, it is easy to make an undetected typing error which will ultimately show up as a misprint on the label for that **PLU**. Alpha characters which have been entered can be reviewed on the scale display but this is very cumbersome to do.
- d. It takes far longer to enter the **PLU** information directly into the scale than it does to enter it with a PC. This becomes even more than one scale.

3.1 Description of Items Related to **PLUs**

A. **PLU CODE Number (PLUno)**

Each item sold can be assigned a **PLU** code. The **PLU CODE** is a number of 1 to 4 digits in length. The **LP-Series** provide for up to 200, 600, or 1000 such code according to model types. The user can use at least 200 codes as they wish to identify all of the items sold. Once the **PLU CODE** for an item has been entered into the scale, all of the **PLU** information can be easily retrieved for a specific **PLU CODE Number**.

B. **ITEM CODE (iCode)**

This is a code of from one to six digits. If a barcode is used on the label it will carry this number, this number is often used for inventory control. Where there are 1000 or less items, it can simplify things considerably if the user makes the **PLU CODE** the same as Item Code. If a label without a barcode is used, the Item Code can be skipped.

C. **COMMODITY NAME (nAmE)**

This information is printed on the label in either regular height or double height letters. The text is normally used for the name of the item being sold such as ROAST BEEF and if two lines are used, another phase such as ON SCALE, SPECIAL, etc can be entered. Up to 28 characters can be entered on a line. The text can be in either capitals or lower case letters.

- a. For Label Types, One line of double height printing, the first line of text can be printed.
- b. For Label Types, Two lines of single height printing, the two lines of text can be printed.
- c. Characters to be printed can be either capitals or lower case letters. Switching between these two is accomplished by depressing the **SHIFT** key on the keyboard. When capitals have been selected, a small triangle lights over the word **SHIFT** in the UNIT PRICE display. Once capitals have been selected all entries will continue to be capitalized until the **SHIFT** Key is again depressed and the triangle over the word **SHIFT** is extinguished.

D. **MESSAGE NUMBER (MSGno)**

This is a number of from 1 to 200. If the user wants to print the message for the item, the number of message corresponding to the item should be entered. If not, enter 0 in the number. The messages are entered in the entry, **MSG**.

E. UNIT PRICE (PriCE)

The **UNIT PRICE** is the price per unit weight to be charged for an item. Though it is possible to key up to six digits for **UNIT PRICE** and the largest **UNIT PRICE** the scale can use to caculate with is 999999. Therefore numbers greater than 999999 should not be entered.

The scale uses the unit price and the weight to calculate the price for the item sold, which is printed on the label.

F. SHELF LIFE (LiFE)

This is a number from 0 to 366. The number entered is used by the scale to calculate the **SELL BY** date printed on the label. This information is only used for perishable items which have a limited shelf life. If a label with no **SELL BY** date is required, a 0 is entered when the scale requests **SHELF LIFE** entry.

G. PROGRAM TARE WEIGHT (taRE)

If an item is normally sold prepackaged in a container, the weight of the container should be subtracted from the total weight. The weight of the container can be automatically subtracted from the total weight by entering it as **PROGRAM TARE**. Refer to the Specification for **PROGRAM TARE**. If this feature is not to be used, a 0 (zero) should be entered for **PROGRAM TARE**.

NOTICE: The PROGRAM TARE WEIGHT of PLU is not available in any countries.

H. GROUP CODE (GCoDE)

The **GROUP CODE** is an additional number (one to two digits) which may be entered on per a **PLU** basis. It may be used to group various items for tracking purposes. This number appears in the left side of the Price on the label. If no **GROUP CODE** is required, a 0 should be entered when the scale requests the **GCoDE** information. And if you want to replace **DEPARTMENT CODE** with **GROUP CODE** of **PLU** in Barcode, see 6.7.3.

4.0 Entry of PRESET KEY Information:

This relates directly to the **PLU** code for an item. Each item in the system is given a **PLU**(Price Look Up) code. The scale allows for the entering of four-digit unique **PLU** codes. This means that, during a sale, if the proper code has been previously entered, the information for any one these previously entered **PLUs** can be retrieved and used as the basis for calculating the total cost of the item sold and generating a label for it.

In many retail businesses, the majority of items sold day after day, represent a small portion of all of the items carried for scale. In this system it is possible to assign 54 **PLU** codes of the possible codes to the items sold most often. Once so assigned, these numbers from 1 to 54 relate to the numbers printed in a circle in the lower left of keys on the large keyboard. Therefore depressing one of these 54 keys recalls the previously stored **PLU** information for this item. The remaining **PLUs** can be recalled as well but require two or more key strokes to recall them.

5.0 Keys and Their Function:

The scale contains two types of key switches. There are two, 3 position, slide switches. The remaining switches are pushbutton switches. Whenever one of the pushbutton switches is depressed the scale will beep.

A. PGM, REG, ACC (Three position slide switch mounted below Keypad)

- a. **PGM** position is used when functions of scale are programmed.
- b. **REG** position is used for normal weighing operation.
- c. **ACC** position is used when Sales Reports are generated.

B. STOP, MANUAL, AUTO and PRT/* (Three position slide switch mounted next to PGM, REG, ACC switch)

- a. **STOP** position is used when the scale is to be used without printing. This position prevents printing even if the **PRT/*** key is depressed.
- b. When in the **MANUAL** position, the **PRT/*** key must be depressed in order for a label to be printed.
- c. In **AUTO** position, a label will be automatically printed after the item has been weighed and a **PLU** or **PRESET** has been selected.

C. Alpha and SPACE/PRESET Keys

- a. When is in **PGM, REG, ACC** switch is in **PGM** mode, these keys are used to program such items as the **SHoP** etc. The space key is used to insert spaces between in text being entered. Each space counts as a character.
- b. When in **REG** position, the 54 keys become the **PRESET** keys.

D. Numeric Keys (0 thru 9)

These keys are used to enter the number information.

E. C (Clear Key)

This key is used to clear a previous entry.

F. SHIFT Key

This key allows for switching between capitals and lower case letters. It is used during programming in conjunction with Alpha keypad. When the Alpha (large) keyboard is in the capitalize mode, a small triangle over **SHIFT** in the **UNIT PRICE** window will be lit. Pressing the **SHIFT** key again will take the keyboard out of the capitalize mode and triangle will be extinguished.

G. ZERO

In the event that, with no weight on the scale, the scale drifts from zero for any reason, depressing the **ZERO** key will rezero the scale. This key is only used when the **PGM, REG, ACC** switch is in the **REG** mode.

H. TARE

In the **REG** mode, this key allows for entering a tare value for an item being weighed. The weight entered for the tare is subtracted from the total weight, when the price of the item is calculated.

I. DATE/TIME

In the **REG** mode, pressing the **DATE/TIME** switch will cause the displays to display the date and time at that moment. If it is found to be incorrect, it must be reset in the **PGM** mode.

J. FEED

The **FEED** key will cause the printer to feed blank labels whenever is depressed twice. This switch is used when a new roll of labels is installed and the user wants to check that they are feeding correctly.

K. SAVE

The **SAVE** key is used in the **REG** mode to save the tare and price. These values are saved and used to generate labels when packaging multiple items with the same tare and same unit price.

L. x

The **x** key allows the user to print multiple labels with the same information. To use it, the user presses a **PRESET** key or enters a **PLU** number, puts the respective item on the scale, presses the **x** key and a number key such as 3. The scale then generates 3 labels with the same information for the item that was weighed or had fixed-price.

M. +

The **+** key is used in the **REG** mode to add several transactions and print Total Price for them. To use it, the user presses the **+** key instead of pressing **PRT/*** key, after each transaction. Whenever depressed the **+** key, a label for the transaction is issued. After all the transaction have been performed, press **PRT/*** key. The printer then will issue the label with the Total Price as the result for all the transaction.

NOTICE: The + Key does not work legally in any country's version.

N. PLU

The **PLU** key is used in the **PGM** mode (see Section 7) and in the **REG** mode to select a previously stored **PLU** for an item being weighed.

O. ENTER

The **ENTER** key is used in conjunction with the entry of the **SHoP** information. After the first line of up to 28 characters are entered, the a **ENTER** key is depressed once. Then the next line of up to 28 characters of information for **SHoP** can be entered. This key is used in entering **COMMODITY NAME** of **PLU** and **MESSAGE** information too.

P. UP-ARROW and DOWN-ARROW Keys

The **UP-ARROW** and **DOWN-ARROW** keys can be used during programming to move between items to be programmed. They are helpful, during the programming, if you wish to change something that you previously programmed. They can only be used when the only window displaying anything is the **WEIGHT** window. At any other time these keys are locked out. For example, if you had programmed the **LABEL FORMAT TYPE** and were now set to program time per Section 6.6.1 and decided you would like to reprogram the **HEADER** information over again, you could reach it by depressing the **UP-ARROW** Key two times.

Q. FOR

The **FOR** key is used in when printing "Price Only" labels for items which are sold at one price for a quantity.

R. COR

The **COR** key is used for cancel the account data that resulted from printing label. You can delete the account data right after printing label. The **COR** Key can be used during adding transactions.

S. PAY

The **PAY** key is used to calculate **CHANGE** after adding several transactions.

NOTICE: The PAY Key does not work legally in any country's version.

6.0 Programming Information Common to All LABELS:

6.1 Set-Up for Programming

A. Place the **PGM, REG, ACC** switch in the **PGM** position.

WEIGHT <div>PLU</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
---	---	-----------------------------------

6.2 To Program **HEADER FOR NON-PLU**, do the following

1. Press down-arrow key on large keyboard two or three times until **HEAd** appears in **WEIGHT** display.

Press Press Press (Press)
↓ ↓ ↓ ⌵ ↓ ⌶

WEIGHT <div>HEAd</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
--	---	-----------------------------------

2. Press PRT/←	WEIGHT <div>E Hd</div> <div>ZERO TARE</div>	UNIT PRICE <div>01.01</div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
-------------------	--	--	-----------------------------------

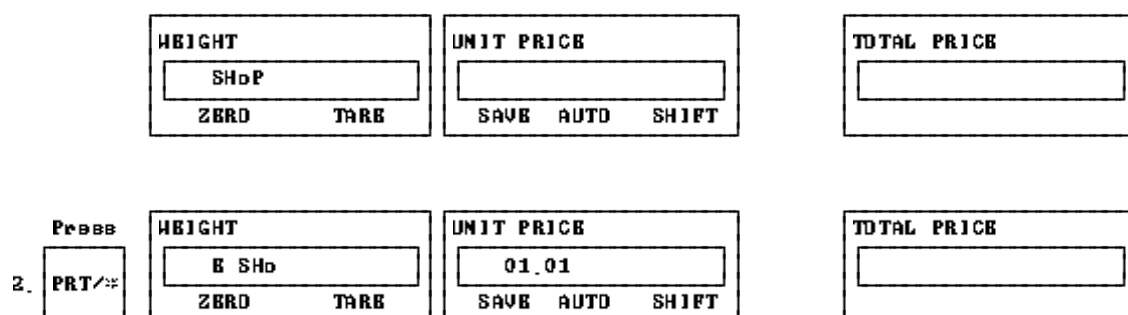

Notes concerning entering **HEADER FOR NON-PLU ITEM** information

- a. Enter up to 28 characters for the **HEADER** information.
- b. To capitalize, observe the **UNIT PRICE** display just above the word **SHIFT**. If a small triangle is lit, the scale is in the capitalize mode. If not, depress **SHIFT** key once. Each time the **SHIFT** key is depressed once the scale will switch into and out of the capitalize mode.
- c. The **TOTAL PRICE** display window displays the characters that has been entered when the key is depressed. It also can be used to review the characters that have been entered previously by using the right and left arrow key on the keyboard. The **UNIT PRICE** display will show the number of the character that is being displayed.
- d. Observe the **UNIT PRICE** display. The 01 before the decimal point indicates that this is the first line of **SHOP** information being entered. The two numbers after the decimal point display the number of the character out of a total of 28 that has been entered or is being displayed in the **TOTAL PRICE** display. The characters that can not be displayed will appear in the shape of _.

- e. After the **HEAD** information has been entered with the large keyboard, press **PRT/*** key and proceed to Section 6.3.1.

6.3 To Program **SHOP ADDRESS**, do the following

6.3.1 Key in the first line of **SHOP ADDRESS** of up to 28 characters

Notes concerning entering **SHOP ADDRESS** information

- a. **SHOP ADDRESS** information applies only to **LABEL FORMAT TYPES** where no information was preprinted at the bottom of the label. If you are not using one of these types, you do not need to program this information.
- b. Though this area of the label can be used for the name and telephone number of your shop, it can be used for any other message you wish. The message can be 2 lines of up to 28 characters each.
- c. To capitalize, observe the **UNIT PRICE** display just above the word **SHIFT**. If a small triangle is lit, the scale is in the capitalize mode. If not, depress **SHIFT** key once. Each time the **SHIFT** key is depressed once the scale will switch into and out of the capitalize mode.
- d. The **TOTAL PRICE** display window displays the characters that has been entered when the key is depressed. It also can be used to review the characters that have been entered previously by using the right and left arrow key on the keyboard. The **UNIT PRICE** display will show the number of the character that is being displayed.
- e. Observe the **UNIT PRICE** display. The 01 before the decimal point indicates that this is the first line of **SHOP** information being entered. The two numbers after the decimal point display the number of the character out of a total of 28 that has been entered or is being displayed in the **TOTAL PRICE** display. The characters that can not be displayed will appear in the shape of _.
- f. After the first line of the **SHOP** information has been entered with the large keyboard, press the **ENTER** key on the large keyboard once. You will then be able to enter the second line of information. If you do not require the second line, press the **PRT/*** and continue on to Section 6.3.2.

Press

ENTER

6.3.2 Key in the Second line of **SHOP ADDRESS** of up to 28 characters in same way as in Section 6.3.1.

WEIGHT E SHo ZERO TARE	UNIT PRICE 02.01 SAVE AUTO SHIFT	TOTAL PRICE
-------------------------------------	---	------------------------

- a. After the second line of **HEADER** information has been entered with the large keyboard, press **PRT/*** key and proceed to Section 6.4.

6.4 To Program **DEPARTMENT NUMBER**, do the following

	WEIGHT SBt ZERO TARE	UNIT PRICE SAVE AUTO SHIFT	TOTAL PRICE
--	-----------------------------------	--	------------------------

1. Press **PRT/***

	WEIGHT SBt ZERO TARE	UNIT PRICE EntEr SAVE AUTO SHIFT	TOTAL PRICE
--	-----------------------------------	---	------------------------

2. Press 3

	WEIGHT SBt ZERO TARE	UNIT PRICE EntEr SAVE AUTO SHIFT	TOTAL PRICE 3
--	-----------------------------------	---	-------------------------

3. Press **PRT/***

	WEIGHT dPtno ZERO TARE	UNIT PRICE EntEr SAVE AUTO SHIFT	TOTAL PRICE
--	-------------------------------------	---	------------------------

4. Enter one to two digits for **DEPARTMENT CODE**; For this example, we have entered No.2,

Press 2

WEIGHT dPtno ZERO TARE	UNIT PRICE EntEr SAVE AUTO SHIFT	TOTAL PRICE 2
-------------------------------------	---	-------------------------

Press PRT/	WEIGHT	UNIT PRICE	TOTAL PRICE
	<div>Set</div> <div>ZERO TARE</div>	<div></div> <div>SAVE AUTO SHIFT</div>	<div></div>

6.5 To Program LABEL FORMAT TYPE, do the following

The four digit value (D1D2D3D4) entered in this entry represents six functions according to each digit number.

6.5.1 To Select the LABEL STYLE (D1) :

See FIGURE 2-1, 2-2 and 2-3.

Entered value	LABEL STYLE
1	A
2	B
3	C

6.5.2 To Select the PLU Item Description Format (D2) :

Entered value	PLU Item Description Format
1	Print only the first line of Item name in double height.
2	Print two lines of Item name in single height.
3	Print the first line of Item name in double height and Message.
4	Print two lines of Item name in single height and Message.

6.5.3 To Select Shop Address Printing Method and Preprinted Advertisement Message Printing (D3) :

You can use the additional 20mm-height Preprinted Advertizing Message under Shop Address Printing Area.

Entered value	CONTENT
1	Use Preprinted Shop Address and no Advertizing Message.
2	Use Scale-printing Shop Address and no Advertizing Message.
3	Use Preprinted Shop Address and Advertizing Message.
4	Use Scale-printing Shop Address and Advertizing Message.

6.5.4 To Select Barcode Format (D4) :

The table below shows the makeup of the 8 possible barcode formats, one of which may be entered with the numeric keypad. The number entered will appear on D4 digit in the **TOTAL PRICE** window.

Entered value	Barcode Element Definition (for UPC,BAN,JAN,KAN Codes)	# of Digits in Price
0	NO BARCODE	
1	D1 D2 I1 I2 I3 I4 I5 PC P1 P2 P3 P4 C	4
2	D1 D2 I1 I2 I3 I4 PC P1 P2 P3 P4 P5 C	5
3	D1 D2 I1 I2 I3 I4 I5 I6 P1 P2 P3 P4 C	4
4	D1 D2 I1 I2 I3 I4 I5 P1 P2 P3 P4 P5 C	5
5	D1 D2 I1 I2 I3 I4 P1 P2 P3 P4 P5 P6 C	6
6	D1 D2 I1 I2 I3 P1 P2 P3 P4 P5 P6 P7 C	7

6.7 To Program **SPECIAL INFORMATION PRINTING**, do the following

The four digit value (D1D2D3D4) entered in this entry represents fifteen functions according to each digit number.

6.7.1 To Select **Printing Serial Number and Time on printing (D1)** :

Entered value	CONTENT
1	Not print Serial No. and Time on printing
2	Print Serial No. and no Time on printing
3	Print Time on printing and no Serial No.
4	Print Serial No. and Time on printing

Note : To reset Serial Number, after making a step 3 in section 13.2, enter 22757 and press **PRT/*** Key. Then **Sn CLr** will appear in **UNIT PRICE** display with beep sound.

6.7.2 To Select Printing PACKED ON DATE and SELL BY DATE (D2) :

Entered value	CONTENT
1	Not print PACKED ON DATE and SELL BY DATE
2	Print PACKED ON DATE and no SELL BY DATE
3	Print SELL BY DATE and no PACKED ON DATE
4	Print PACKED ON DATE and SELL BY DATE

6.7.3 To Select Printing PLU CODE NUMBER and Printing Department Code or Group Code of PLU on Barcode (D3) :

Entered value	CONTENT
1	Not print PLU CODE No. and print Department Code on Barcode.
2	Print PLU CODE No. over Price Printing Position and Department Code on 1st and 2nd digit of Barcode.
3	Not print PLU CODE no. and print Group Code of PLU on Barcode.
4	Print PLU CODE No. over Price Printing Position and Group Code of PLU on 1st and 2nd digit of Barcode.

6.7.4 To Select Changing UNIT PRICE of PLU in REG. mode (D4) :

Entered value	CONTENT
1	Impossible to change UNIT PRICE of PLU in REG. mode.
2	Be changed temporarily on printing label after calling PLU and entering new UNIT PRICE.
3	Be changed permanently on printing label right after calling PLU and entering new UNIT PRICE.

	WEIGHT <input type="text" value="SEt"/> ZERO TARE	UNIT PRICE <input type="text"/> SAVE AUTO SHIFT	TOTAL PRICE <input type="text"/>
1. Press	WEIGHT <input type="text" value="SEt"/> ZERO TARE	UNIT PRICE <input type="text" value="EntEr"/> SAVE AUTO SHIFT	TOTAL PRICE <input type="text"/>
2. Press	WEIGHT <input type="text" value="SEt"/> ZERO TARE	UNIT PRICE <input type="text" value="EntEr"/> SAVE AUTO SHIFT	TOTAL PRICE <input type="text" value="6"/>
3. Press	WEIGHT <input type="text" value="Pmode"/> ZERO TARE	UNIT PRICE <input type="text" value="EntEr"/> SAVE AUTO SHIFT	TOTAL PRICE <input type="text" value="1411"/>

4. For example, if the following **FORMAT** is needed, enter 3321 with the numeric keypad.

Example) . Print Serial Number and Time on printing.

. Print PACKED ON DATE only.

. Print PLU CODE Number and print Department Code on barcode.

. Change UNIT PRICE of PLU permanently after issuing label.

PRT/⌘				

6.8 To Program Weight Variation Range that allows to print label in AUTO Print Mode, do the following

Weight Variation Range means difference, that makes next printing enable, between weight of this time and that of the next time.

For example, if Weight Variation Range was set to 5g and printing label had 450g, the weight with difference over 5g, below 445g or over 455g, can make the next label to be printed.

The minimum value is the Interval of the scale and the maximum value is the maximum capacity.

Note : If your scale is set by OIML Regulation, the value entered in this entry is ignored and the scale prints out labels with the weights over Minimum weight that is defined by OIML.

	WEIGHT Sbt ZERO TARE	UNIT PRICE SAVE AUTO SHIFT	TOTAL PRICE
1. Press	WEIGHT Sbt ZERO TARE	UNIT PRICE Enter SAVE AUTO SHIFT	TOTAL PRICE

8.9 To Program GROUP CODE do the following

	Press	HEIGHT	UNIT PRICE	TOTAL PRICE
1.	PRT/⌘	<div>GCode</div> <div>ZERD TARE</div>	<div></div> <div>SAVE AUTO SHIFT</div>	<div></div>
2.	PRT/⌘	<div>GCode</div> <div>ZERD TARE</div>	<div>EntEr</div> <div>SAVE AUTO SHIFT</div>	<div>0</div>

3. Key in a **GROUP CODE** (0 to 99); For example, 21.

	Press	Press	
	<div>2</div>	<div>1</div>	
	HEIGHT	UNIT PRICE	TOTAL PRICE
	<div>GCode</div> <div>ZERD TARE</div>	<div>EntEr</div> <div>SAVE AUTO SHIFT</div>	<div>21</div>

8.10 To **CHECK** all information programmed for **this PLU CODE number** do the following

1. Press PRT/*	WEIGHT <div>SAVE</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>

2. Press the **PRT/*** key when the **WEIGHT** window displays **SAVE** causes a label to be printed with the **PLU CODE** number just entered unless Print Mode is not in **STOP**. It also causes the **WEIGHT** display to display **PLU_{no}**. The scale is now ready for entry of information for another **PLU CODE** Number.

WEIGHT <div>PLU_{no}</div> <div>ZERO TARE</div>	UNIT PRICE <div>199</div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div>0</div>
--	--	------------------------------------

O R

3. If you do not wish to enter information for additional **PLU CODE** Numbers, press the zero key on the numeric keyboard once. Then press the **PRT/*** key once. The scale is then set up to program the **PRESET KEYS**. (See Section 11.0)

WEIGHT <div>PreSet</div> <div>ZERO TARE</div>	UNIT PRICE <div>199</div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
--	--	-----------------------------------

9.0 Erasing All Information For A PLU #:

9.1 Place the Scale in the Program mode

- A. Place **STOP, MANUAL, AUTO** switch in **MANUAL** position.
- B. Place **PGM, REG, ACC** switch in the **PGM** position.

	<div style="border: 1px solid black; padding: 5px;"> WEIGHT <div style="border: 1px solid black; height: 20px; margin: 5px 0;"></div> PLU <div style="display: flex; justify-content: space-between;">ZERD TARE</div> </div>	<div style="border: 1px solid black; padding: 5px;"> UNIT PRICE <div style="border: 1px solid black; height: 20px; margin: 5px 0;"></div> <div style="display: flex; justify-content: space-between;">SAVE AUTO SHIFT</div> </div>	<div style="border: 1px solid black; padding: 5px;"> TOTAL PRICE <div style="border: 1px solid black; height: 20px; margin: 5px 0;"></div> </div>

11.0 Programming PRESET Keys With Scale Keyboard:

11.1 If the scale is not in the programming mode do the following

- A. Place the **PGM**, **REG**, **ACC** switch in the **PGM** position.

HEIGHT <div>PLU</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
---	---	-----------------------------------

11.2 To program **PRESET** Key do the following

1. Press down arrow key on large keyboard once.

Press

HEIGHT <div>PRESet</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
--	---	-----------------------------------

Notes Concerning Setting Up **PRESET** Keys

- Each key on the large keyboard is numbered from 1 to 54. These are the **PRESET** Key numbers.
- The first 54 **PLU CODE** Numbers have been preassigned to equal the first 54 **PRESET** Key numbers. No programming other than programming the first 54 **PLU CODE** Numbers(per Section 7) is necessary if you use them as such. Therefore **PLU CODE** Number 1 equals **PRESET** Key Number 1 and so on for all 54 **PRESET** Key Numbers.
- If you wish, you can program a **PRESET** Key Number to a number different from the **PLU CODE** Number. For example, to set **PRESET** Key 2 equal to **PLU CODE** Number 59 you would do the following:

2.

PRT/Σ

HEIGHT <div>S KEY</div> <div>ZERO TARE</div>	UNIT PRICE <div></div> <div>SAVE AUTO SHIFT</div>	TOTAL PRICE <div></div>
---	---	-----------------------------------

3. On the large keyboard, press **PRESET** Key 2.

PRT/*	HEIGHT <div style="border: 1px solid black; padding: 2px; text-align: center;">S KEY</div> <div style="display: flex; justify-content: space-between; font-size: small;"> ZERO TARE </div>	UNIT PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;">2</div> <div style="display: flex; justify-content: space-between; font-size: small;"> SAVE AUTO SHIFT </div>	TOTAL PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;">2</div>
--------------	--	---	---

4. Key in 59 on the numeric keypad

Press Press

5	9
---	---

HEIGHT <div style="border: 1px solid black; padding: 2px; text-align: center;">S KEY</div> <div style="display: flex; justify-content: space-between; font-size: small;"> ZERO TARE </div>	UNIT PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;">2</div> <div style="display: flex; justify-content: space-between; font-size: small;"> SAVE AUTO SHIFT </div>	TOTAL PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;">59</div>
--	---	--

5.

PRT/*	HEIGHT <div style="border: 1px solid black; padding: 2px; text-align: center;">S KEY</div> <div style="display: flex; justify-content: space-between; font-size: small;"> ZERO TARE </div>	UNIT PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;"></div> <div style="display: flex; justify-content: space-between; font-size: small;"> SAVE AUTO SHIFT </div>	TOTAL PRICE <div style="border: 1px solid black; padding: 2px; text-align: center;"></div>
--------------	--	--	--

6. If **PLU** information had not been previously entered for **PLU CODE** Number 59, the **TOTAL PRICE** window would display invALid when the **PRT/*** key was pressed.
7. To program other special **PRESET** Keys, repeat steps 3, 4 and 5.
8. Once all special programming of **PRESET** Keys has been completed, press the zero key on the numeric keypad and then the **PRT/*** key to leave this programming mode.

SECTION III

OPERATION

OF THE

LP - SERIES

PRINTING SCALE

12.0 Operating The LP-Series As A Printing Scale and Label Printer:

1. In order to set the LP-Series for use as a printing scale and label printer, place the **PGM, REG, ACC** switch in the **REG** position.
2. The **STOP, MANUAL, AUTO** switch should be set to either the **MANUAL** or **AUTO** position. In the **AUTO** position a label will be printed automatically as soon as the item has been weighed. In the **MANUAL** position, to print a label, depress the **PRT/*** key. The **AUTO** printing of the scale only operates when a **PRESET** key is depressed or a **PLU CODE** Number is entered and an item is weighed.

12.1 Transaction Using The PRESET Keys

1. Assuming no **TARE** has been preprogrammed in for this **PLU** item, if it is necessary to account for the tare weight of the container, place the empty container on the scale platform and press the **TARE** key on the small keypad. The **WEIGHT** window should display the tare weight of the container until the **TARE** key is depressed. It will then display all zero as long as the empty container is left on the scale platform. Once it is removed, it will display a negative value equal to the tare weight of the container.
2. Depress the proper **PRESET** key on the large keyboard for the item to be weight. The **UNIT PRICE** window will display the price/weight that has been programmed in for that key.
3. Place the item to be weighed on the scale platform (with it's container if a tare for the container has been entered). The **WEIGHT** window will display the total weight of the item minus the tare of the container. The **UNIT PRICE** window will continue to display the price/weight. The **TOTAL PRICE** window will display the price to be charged for the item.
4. If not in **AUTO**, depress the **PRT/*** to print a label.
5. Once all weighing operations based on a specific container and it's tare are complete, the unit price and the tare weight will be returned to zero by removing all weight from the scale platform and depressing the **TARE** key unless the save function is used. This clears the **WEIGHT** display to an all zero's state.
6. If the **UNIT PRICE of PLU** can be changed and the save function is used, **UNIT PRICE** entered right after using the **PRESET** Key is regarded as the **UNIT PRICE** that is updated temporarily or permanently. If you want **PLU** and **NON-PLU** transaction, you should press **CLEAR** Key to initialize.

12.2 Transactions Using **The PLU CODE Number**

1. If it is necessary to account for the tare weight of the container, follow Section 12.1.1.
2. Key in the **PLU CODE** Number for the item to be weighed. For example for **PLU CODE** Number 129, key in a 1 then a 2 then a 9 on the small numeric keypad. The price/weight for that **PLU** will appear in the **UNIT PRICE** window.
3. Depress the **PLU** key on the small keypad.
4. Place the item to be weighed on the scale platform. The **WEIGHT** window will display the total weight of the item minus the tare weight entered, if any. The **UNIT PRICE** window will continue to display the price/weight. The **TOTAL PRICE** window will display the price to be charged for the item.
5. If in the **MANUAL** mode, depress the **PRT/*** key to print a label for the item.
6. Once all weighing operations based on a specific container and it's tare are complete, the unit price and the tare weight will be returned to zero by removing all weight from the scale platform and depressing the **TARE** key unless save function is used. This clear the **WEIGHT** display to an all zero's state.
7. If the **UNIT PRICE of PLU** can be changed and the save function is used, **UNIT PRICE** entered right after using the **PLU CODE** Number is regarded as the **UNIT PRICE** that is updated temporarily or permanently. If you want **PLU** and **NON-PLU** transaction, you should press **CLEAR** Key to initialize.

12.3 Weighing And Labeling Prepackaged Items

1. Assuming that the prepackaged item to be weighed have been packaged sitting on some sort of tray such as one made from styrofoam, place an empty tray on the scale platform.
2. Depress the **TARE** key on the small keypad. Depress the save key on the same keypad. A small triangular pointer of light will in the **UNIT PRICE** window pointing to the word **SAVE** printed on the frame of this window. This indicates that the scale is in the **SAVE** mode and will save the tare weight for the styrofoam tray. This tare weight will be saved until all weight is removed from the scale platform, the **SAVE** key is again pressed and the **TARE** key is again pressed.
3. Remove the empty tray from the scale platform. The **WEIGHT** display will display a negative number equal to the tare of the empty tray.

4. You have three possible options for entering the remaining information including price/weight.
 - A. You may key in the unit price of the item being prepackage. It's unit price will appear in the **UNIT PRICE** window. This value will also be saved until the **SAVE** key is again depressed and the triangular point of light on the **UNIT PRICE** display pointing to **SAVE** is extinguished.
 - B. You may press one of the **PRESET** keys (See Section 11.1.1 above). In this case, in addition to the price/weight stored for this **PLU**, all of the other information which has been previously stored for this **PLU CODE** Number will be printed on the label for every item weighed.
 - C. You may enter a **PLU CODE** Number (See Section 11.2.1). The scale will calculate and print based on the information previously stored for that **PLU CODE** Number.
5. Place a prepackage item on the scale platform. The **TOTAL PRICE** window will display the total price to be charged for the item package. If in **AUTO** mode, the printer will print a label. If in **MANUAL**, depress the **PRT/*** Key to print a label.
6. Repeat 5 for the remaining items to be weighed and labeled.
7. Once all weighing operations based on a specific container and it's tare are complete, the tare weight can be returned to zero by removing all weight from the scale platform and depressing the **TARE** key. This should clear the **WEIGHT** display to an all zero's state.

12.4 Entering **TARE** with The Scale's Numeric Keypad

This feature is useful if items are often sold packaged in a limited number of containers such as selling Cole Slaw in 100g, 200g and 500g container. It is used as followings:

1. Weigh each different container and record their weights.
2. Using the numeric keypad, enter the **TARE** that was previously recorded for that container size, prior to placing the filled container on the scale platform. The numbers entered will appear in the **UNIT PRICE** window.
3. Depress the **TARE** key on the small keypad. The number in the **UNIT PRICE** window will now be displayed in the **WEIGHT** window as negative number. Lit triangles in the **WEIGHT** window will point to the words **ZERO** and **NET** indicating that the tare has been entered and the scale will provide the total cost based on subtracting this tare.
4. Place the filled container on the scale platform.

5. Key in the price/weight or depress a **PRESET** key or enter a **PLU CODE** Number and the scale will calculate the total price of the Cole Slaw in the container.
6. Print a label by depressing the **PRT/*** if in the **MANUAL** mode.
7. Once operation is complete, remove the item from the scale platform and press the **TARE** key. This will return the **WEIGHT** display to a zero reading.

12.5 Printing **Multiple Labels** With The Same Information

In any of the above weighing operations, if desired, more than one label could have been printed for any item weighed. This can be accomplished as follows:

1. Place the **STOP, AUTO, MANUAL** switch in the **MANUAL** mode.
2. Perform the weighing operations as listed above but do not press the **PRT/*** key.
3. Depress the **x** switch on the small keypad.
4. With the numeric keypad, key in a number equal to the number of labels to be printed. This number will be appear in **WEIGHT** window.
5. Press the **PRT/*** key and the printer will print the number of labels requested. But the printed label sticks on the bar before being removed if print mode is on **MANUAL**. But on **AUTO** mode, the printed labels come out rapidly with the back paper on succession

12.6 Generating **"Price Only"** Labels For A PLU Item Sold For A Fixed Price

The scale is capable of acting as a label printer to generate **"Price Only"** labels for a **PLU** Coded items whose price is fixed and therefore does not depend on weight such as a bottle of Aspirin for \$ 3.00. Such labels are printed as follows:

1. Place the **STOP, AUTO, MANUAL** switch in the **MANUAL** mode.
2. Press one of the **PRESET** keys or enter a **PLU CODE** Number.
3. Press the **PRT/*** key and a **" Price Only "** label will be printed for that **PLU** item.

12.7 Generating **"Price Only"** Label for A Non-PLU Item

A **" Price Only "** label can be generated for a **Non-PLU** item as well. For such an item, the printing on the top of the label will be the text of **HEADER** information. To print such a label do the follows:

1. Place the **STOP, AUTO, MANUAL** switch in the **MANUAL** mode.
2. Enter the price to be printed on the label using the numeric keypad.
3. Press the **PRT/*** key and the printer will print the label.

12.8 Generating "Price Only" Labels For PLU Coded Items Sold At One Price For a Quantity

The scale is capable of generating "Price Only" labels for items which are sold in quantity at one price. For example it can generate a label that shows price and the number of items being sold for that price such a 5 pcs. for \$ 2.00. This can be accomplished as follows:

1. Key in the **PLU** Code Number and depress the **PLU** key once.
2. Key in the quantity with numeric keys on the small keypad.
3. Depress the **FOR** key on the small keypad.
4. Key in the price to be charged for that quantity with the numeric keys.
5. Press the **PRT/*** key to print the label for that **PLU** item with the item's name and other information entered during **PLU** programming except with the quantity entered in 2 and the price entered in 4.

Note : If step 1 is skipped, the "Price Only" label will be printed with **HEAD** information instead of a **PLU** item name.

12.9 Adding transactions and Calculating Change

NOTE : This function can not exist in your scale by OIML Regulation.

The scale is capable of adding and calculating Charge. For example, the **Total Price** for three is \$ 7.95 and the user have been received \$ 8.00 from a customer. To calculate Change do the follow

1. Place the **STOP, AUTO, MANUAL** switch in the **MANUAL** mode.
2. Press + Key after each transaction and label is printed out.
3. After adding all transactions, **PRICE** window will be displayed in the word, **ACC 3**. The **TOTAL PRICE** window will be displayed in 7.95.

Press <div style="border: 1px solid black; padding: 5px; text-align: center;">+</div>	WEIGHT <div style="border: 1px solid black; height: 20px; margin: 5px;"></div> <div style="display: flex; justify-content: space-between;"> ZERO TARE </div>	UNIT PRICE <div style="border: 1px solid black; padding: 5px; text-align: center;">ACC03</div> <div style="display: flex; justify-content: space-around; font-size: small;"> SAVE AUTO SHIFT </div>	TOTAL PRICE <div style="border: 1px solid black; padding: 5px; text-align: center;">7.95</div>
---	--	--	--

4. If you want to get a Adding Total Price Label, press **PRT/*** Key.
5. Press the **PAY** Key on the small keypad and the **WEIGHT** window will be played in the word, **CHA**.

Press PAY	WEIGHT	UNIT PRICE	TOTAL PRICE
	CHA ZERO TARE	 SAVE AUTO SHIFT	7.85

6. Key in 8.00 on the numeric keypad.

Press	Press	Press

WEIGHT	UNIT PRICE	TOTAL PRICE
CHA ZERO TARE	 SAVE AUTO SHIFT	8.00

7. Press PRT/*	WEIGHT	UNIT PRICE	TOTAL PRICE
	CHG ZERO TARE	 SAVE AUTO SHIFT	0.05

8. To clear all displays for other operation, press the **C** Key.

12.10 Cancelling Printed Label

If you made a mistake with printing label, you can cancel that label and delete the account result of that in report data. This can be accomplished as follows:

1. Press **COR** Key right after printing label.
2. This function is effective after multiple label operation and addition.
3. As this operation is proceeded, the buzzer will make a beep sound and **dELEte** will appear in Price display.

13.0 Report Operation :

13.1 Report Printing information.

The LP-Series scale itself is capable of printing a report of all sales made involving the scale since the last time the scales record was cleared.
There are four kinds of Reporting.

- A. GRAND TOTAL WITH PLU AND NON PLU ITEM REPORTS**
- B. NON-PLU ITEM REPORT**
- C. ALL PLU ITEMS REPORT**
- D. EACH PLU ITEM REPORT THAT YOU WANT**

13.2 Printing A Sales Report with the LP-Series

To print a report of all sales made since the last time the scale sales records were cleared:

1. Place the **PGM, REG, ACC** switch in the **ACC** mode.
2. The **WEIGHT** window will display the word, **PRINT**.
3. Press the **PRT/*** Key.
4. Do followings to get what kind you want.
 - A. Press **LEFT ARROW** Key for **GRAND TOTAL REPORT**
 - B. Press **RIGHT ARROW** Key for **ALL PLU ITEM REPORT**
 - C. Press **UP ARROW** Key for **NON-PLU ITEM REPORT**
 - D. Enter **PLU CODE** Number and Press **PLU** Key for each **PLU REPORT**
5. To quit reporting, Press **PRT/*** Key.

13.3 Clearing Stored Sales Report Data After Printing A sales Report

NOTE : If your scale has a **Down-Arrow Key** with **CLR** lettering, you can clear easily sales report data as above 13.2.4, and skip this procedure.

1. Place the **PGM, REG, ACC** switch in the **ACC** mode.
2. The **WEIGHT** window will display the word, **Print**.
3. Press the **DOWN-ARROW** Key once.

4. The **WEIGHT** window will display the word, **CLEAR**.
5. Press the **PRT/*** Key.
6. **wait A moment** appears in windows for a moment.

14.0 Receive PLU DATA from other LP Scales (RS232C OPTION)

14.1 Information of Receiving PLU DATA form other LP Scales

The LP-Series scale itself is capable of receiving programmed PLU data that other LP-Series scales. But you should check whether two scales are same kinds to link each other. To operate this function correctly, you use scales that have same PLU capacity.

14.2 Receiving **PLU DATA** from other scale

1. Link two scales with RS-232C cable.
2. Place the **PGM, REG, ACC** switch of the scale that will send **PLU DATA** in the **REG** mode. Press **CLEAR** Key to assure the initial condition.
3. Place the **PGM, REG, ACC** switch of the scale that will receiving **PLU DATA** in the **ACC** mode.
4. The **WEIGHT** window will display the word, **PRINT**.
5. Press **DOWN ARROW** Key three times
6. **trAnS** appears in **WEIGHT** window for a moment.
7. Press the **PRT/*** Key then **PLU DATA** will transfer between two scales.

SECTION IV

MAINTENANCE

OF THE

LP - SERIES

PRINTING SCALE

15.0 Installation Of A New Roll Of Labels:

1. Verify that the labels to be installed are the correct type (that they match the **Label Format Type** selected for use in your system).
2. Remove the door on the right side (side where printer is located). Refer to FIGURE 15-1 below (Similar to decal affixed to door).
3. Remove ⑦ and slide the empty sleeve from the old roll off of ①. Discard roll.
4. Remove ⑥ and slide the roll of release paper off ⑤. Discard release paper and return ⑥ to it's position.
5. Remove about a dozen labels from the begining of a new roll.
6. Slide the new roll on to ① with the label facing up with the labels exiting ① as shown in FIGURE 15-1. Return ⑦ to position to hold new roll in place.
7. Release lever ④ so that the print head is retracted from its normal print position.
8. Thread the end of the new roll between ② and ③ following the rest of the dashed path on FIGURE 15-1 wrapping a few turns around ⑤.
9. Return lever ⑤ to its original position so that the print head is in contact with labels side.
10. Turn on power and hit the **FEED** key on the small keypad a few times to feed some blank labels. Check that they feed correctly.
11. Print some labels to verify that the label are printed correctly and feed correctly.

PAPER ROLL INSTALLATION

FIGURE 15-1

16.0 Testing Thermal Print Head:

If labels are not being printed completely (parts of labels show drop-outs in printing) the operation of the thermal print head should be checked.

This can be done as follows:

1. Place the **PGM, REG, ACC** switch in the **ACC** position.
2. The **WEIGHT** window should display the word, **Print**.
3. Press the **DOWN-ARROW** Key twice.
4. The **WEIGHT** window will display the word, **CHESS**.
5. Press the **PRT/*** Key and the printer will a label with a checkerboard pattern such as shown in FIGURE 16-1.
6. Check this pattern carefully to insure that it is continuous and there are no drop-out in the printing. If any appear, the scale should be serviced.

FIGURE 16-1

17.0 Error Message

MESSAGE	REASON	SOLUTION
Error 1	Retreiving PLU CODE Number that was not programmed,	Check PLU CODE Number,
Error 2	Recalled PLU CODE Number is over 9999,	Use correct PLU CODE Number,
Error 3	Scale is not stable on setting Tare Weight or printing,	Check place that scale is on then try again,
Error 4	Tare Weight was already set,	Cancel used Tare Weight then try again,
Error 5	Retreived PLU DATA is broken and invalid,	Reprogram that PLU CODE Number and use it,
Error 6	PRINT MODE is on STOP,	Check PRINT MODE,
Error 7	RS232C cable is not linked,	Check if the cable is linked correctly or not,
Error 8	Impossible to transfer PLU DATA between two scales,	Remove entered UNIT PRICE by presssing CLEAR Key,
Error 9	Communication error	Try again from the beginning,
Error 10	Tare Weight entered by Key does not matched INTERVAL of scale,	Check INTERVAL of scale,
Error 11	Tare Weight is over the range,	Check TARE RANGE,
Error 12	Loaded Weight is below Minimum Weight of OIML Regulation,	Contact your dealer,
ZEro rAnGE Error	Initial Weight right after RESET is not valid for weighing correctly,	Check if the tray is installed correctly or not, If correct, contact your dealer,
SCALE IS not StAbLE	Scale is installed on a unstable place,	Check if the scale is installed on a rigid place or not, If right, contact your dealer,
d0 CAL	Programmed Setup data is broken,	Contact your dealer,

18.0 ASSEMBLY GUIDE FOR R-TYPE

19.0 SPECIFICATION

* The R represents the scale with a Pole-Type Display unit.

MODEL		LP-06(R)*	LP-15(R)*	LP-30(R)*
